# Naturally sustainable

A growing number of people making increasingly environmentally and sustainability-oriented purchasing decisions. The discussion about climate change, resource conservation and waste disposal has reached all levels of society and now determines both private and public life day-to-day – in short, it has reached into all areas of life. It is a sign of the times that companies not only formulate clear intentions and positions, but also act!

Our entrepreneurial activities in these almost 100 years have always been characterised by these values: reliability, trust, consistency. These values are becoming more and more important today.

„A FEELING OF HOME“, we have been saying confidently for several years, and by that we mean the reliability, trust and consistency with which we work. Our entire approach is down-to-earth, honest, fresh and close to nature.

This gives us at BERNDES a special claim: our products and services should be in responsible harmony with nature and our environment. Thinking and acting sustainably, for the benefit of the consumer, is practically in the DNA of our brand.

In the future, we not only want to live this approach as we have always done – we also want to display it, make it visible: b.nature!

Berndes®

GERMAN QUALITY SINCE 1921.

# Naturally delicious

- for healthy and enery-efficient cooking
- fully recyclable
- natural quartz coating
- free of PFOA, nickel etc.
- extremely robust
- highly heat-resistant
- powerful non-stick properties

Coating INNOVATION

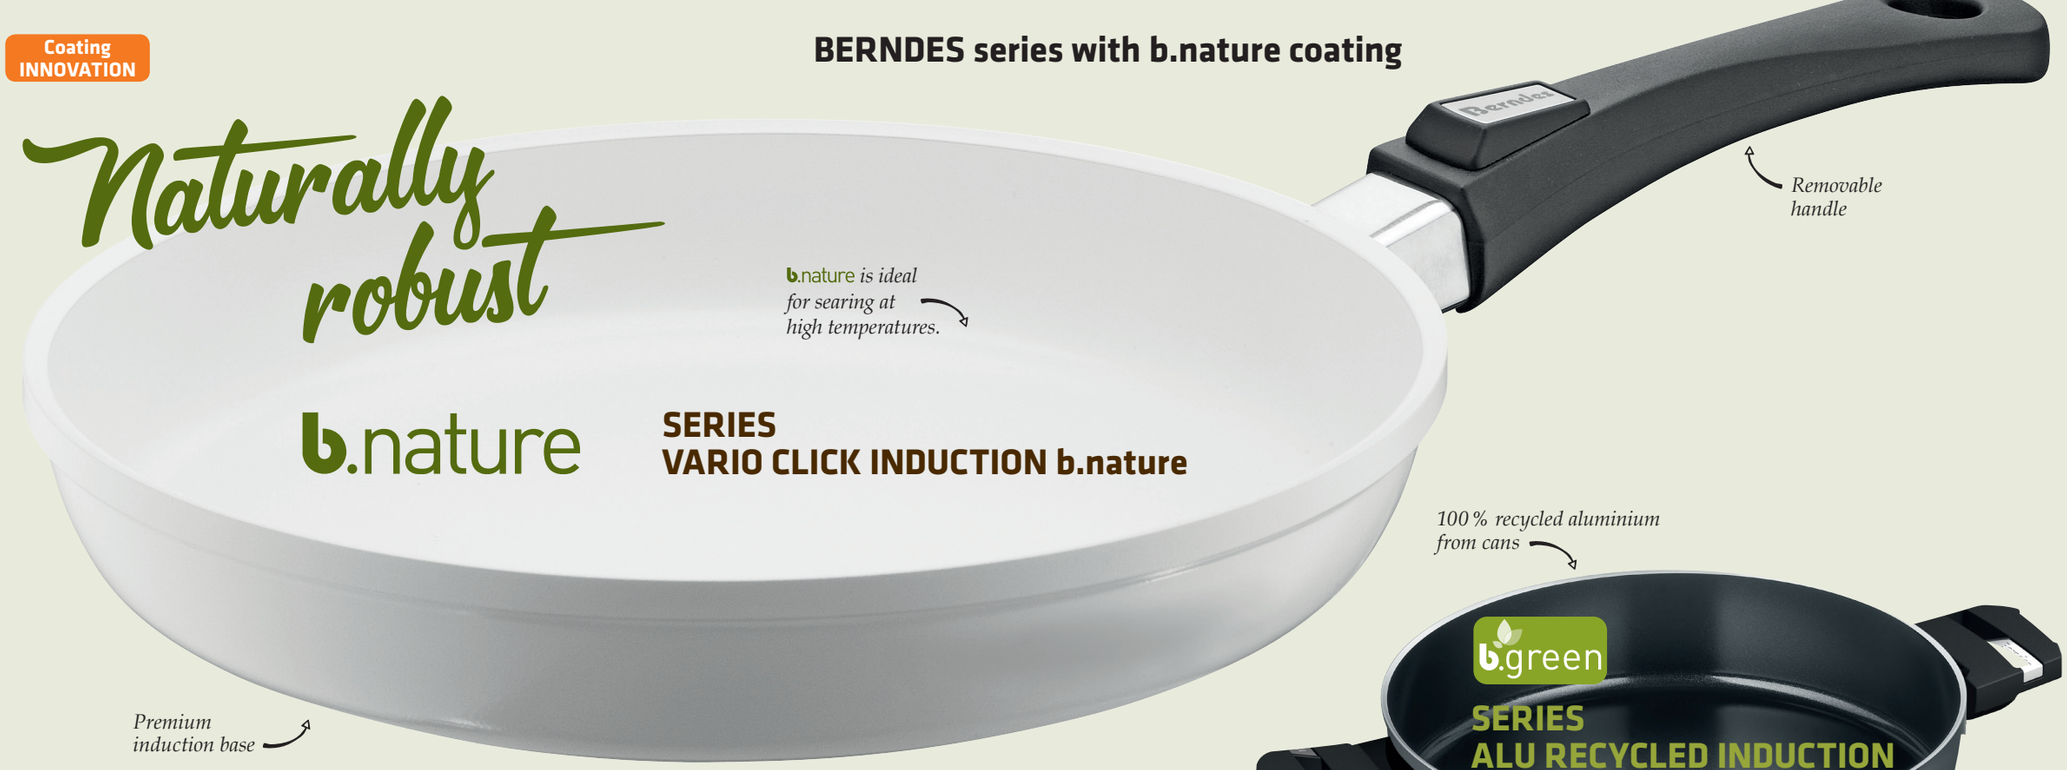
# BERNDES series with b.nature coating

## Naturally robust



b.nature

**SERIES**
**VARIO CLICK INDUCTION b.nature**

If you live in an environmentally responsible way and value fresh, healthy food, you can now rely on naturalness in cookware too: In addition to the outstanding properties of the coating, the use of high-quality aluminium and efficient all-stove bases (i. e. also on induction) guarantee fast heat distribution in the b.nature pan – the heat supply is optimal and can be reduced again at an early stage – save energy!

**The added bonus on top:** BERNDES already uses fully recycled secondary aluminium for all pans and pots during production.

Even our cookware can be recycled later and, thanks to minimized packaging, it is even better for our ecological footprint.

A true all-rounder for a natural and enjoyable cooking experience.

Sustainable thinking and acting is in the DNA of the brand.

This direction will be visible in the future: b.green – solid, safe and in harmony with nature: BERNDES ...

**SERIES**
**ALU RECYCLED INDUCTION**

The sustained manufacture of products in harmony with nature is more important today than ever. That' s why we have developed a completely new coating, which is essentially based on quartz, water and alcohol (as a solvent substitute).

Quartz as a mineral of the earth, has a high natural hardness and makes cookware scratch and cut resistant.

During our production we do not use harmful additives or heavy metals such as PFOA, nickel, cadmium etc.

This natural coating b.nature also stands out for its excellent non-stick properties, durability and easy cleaning. Furthermore, it is perfect for crispy frying at high temperatures.
